

WATER SURFACES

Blue infrastructure
Flooding
Environment
Epidemiology
Ecology
Risk

THE PRODUCT

Water surfaces mapping and monitoring (lakes, reservoirs, ...)
Flood monitoring
Submersion time mapping

Gain in quality and efficiency
for the implementation
of procedures and the
evaluation of public policies

GOALS

Detection and monitoring of water surfaces
Impact of flood maxima
Monitoring of blue infrastructure
Identification of sensitive areas

FOR WHO ?

Institutional and local authorities,
deconcentrated state services,
development agencies,
land use and environmental managers, ...

CHARACTERISTICS

Production time: rush mode (few hours, days), standard mode (weeks)
Product format: raster / vector
Scale: local to regional, from a few km² to thousands of km²
Source data: satellite images, local data
Price: Please contact us
